

Knowledge is one of our best defense/offence strategies. I am always so grateful and impressed with the dedication of vets and their teams to keep the research on going and published to aid us in the care of our camelids. Two years ago our vet school, through Dr. Greg Adams, did some cutting edge research on ovulation. When we heard they needed retired females that were still ovulating we gathered up a group and sent them off to school to help us learn more. Donate animals, time and money wherever possible to win the war on disease and conditions that can impede out progress as an industry. Health care is key!

Support from any ally is support! Our industry related publications, our registry and its programs are providing ammunition on an ongoing basis to ensure our viability as an industry. Support them back with

positive input, advertising, and constant involvement. Get your local media, live and print on your side! We need all the help we can get in this battle!

The best advice for going to the mattresses on an individual basis is from Erre Harvey. If you are feeling alone and overwhelmed, go for singles rather than homeruns. They're a lot easier to hit. Besides, every four singles equals a run... and the bases are still loaded! That's how to win ball games and how to win at the llama game. Don't think that you are walking the long and winding path alone. There is a great network out there and llama people are team players! Pick a side, the side of the positive, up beat, let's get it done team.

We are going to the mattresses!! We are winners! The llamas are the winning team and lucky for us, we are on it!

Llamas
Raising Llamas Since 1995

Fall Is A Great Fencing Season

Fact sheet produced by the Washington County Soil and Water conservation District (SWCD) and the Small Acreage Steering Committee

A Strong Fence Equals Peace of Mind

Fencing can be the third highest investment, after buildings and property. Yet it's comforting to know where your animals are and that they will be there when you come back. Fences control animal movement, define property boundaries, and increase property value. However, fences can also create new problems. Consider how a planned fence may harm wildlife, limit equipment access, harbor weeds, and affect adjoining neighbors. Read on to find out about fence types, layout, and safety for you, your animals, and wildlife.

What Type of Animals are You Keeping In or Out?

The kind of fence you choose will depend on your resources and the animals you are controlling:

- *Certain animals require strong fences.* Coyotes and young cattle require a stronger fence than sheep or goats. Sheep with heavy coats need multiple wires to hold them. Pigs need low wires to keep them from rooting out. Dairy cows need less of a fence. Animal groups with mixed sizes may need a higher or lower height with closer wire spacing.
- *Horses and llamas have special needs.* Horses are fast, physical animals that see small items poorly and need tall, highly visible fencing. A startled horse can run into a single wire and be severely injured. Llamas will not challenge a fence as much, but have large, protruding eyes that can be injured by sharp points. For these reasons, barbed wire should never be used with horses or llamas.

- *Wildlife may be injured or killed by barbed or woven wire.* Smooth wire is safer for wildlife than barbed or woven wire. Space smooth wire at 16, 22, 28, and 40 inches from the ground to allow antelope, deer, and elk to get through with reduced damage to themselves and the fence. The 12-inch gap between the top two wires keeps animals from getting tangled in the wires. Determine whether this wire spacing will hold your livestock.
- *A high number of animals in a small area will need a stronger fence.* Permanent, wooden fences are often used for corrals and barnyards. Temporary electric fences, with two to three wires, are effective in larger areas such as pastures.
- *The stronger the temptation on the other side of the fence, the stronger the fence needs to be.* Strong fences are needed to separate cows from weaning calves, intact males from breeding females, and hungry animals from lush crops.

Fence Laws in Your Community

Fences keep animals off roads and out of crops. On designated "open range," the property owner is responsible for fencing neighboring livestock out. On designated "closed range," the livestock owner is responsible for fencing livestock in and will be liable for loose animals that damage crops, cars, or people. Contact the Oregon Department of Agriculture at (503) 986-4681 to find out the range designation in your area.

When installing a new fence, maintain good neighbor relations by surveying your property lines and installing a legal fence. Some local ordinances may require permits, prohibit fence chargers, and

specify fence types, heights, and setbacks next to roadways, railways, and between neighbors. Contact your local building official for more information.

Designing Paddock Fencing

Your property is unique and will require a fence layout that fits your resources, animals, and site conditions. Here are some key points:

- Paddock location.** Never locate a paddock over the septic system. The drainfield needs uncompacted soil and vigorous grass to work properly. Locating paddocks on the south, east, or west sides of buildings will dry out paddocks quicker than those located on the north sides.
- Paddock shape.** The more square, the better. Livestock will group near the gate in a long, narrow paddock. The result is uneven grazing. Temporary electric wires can shorten up long fields. However, when space is limited, long paddocks make better exercise areas for horses.
- Paddock position on slopes.** Run paddocks across slope. If paddocks run up and down a hill with water at bottom, animals will tend to

The logo for Treasure State Metal Recycling (TSMR) is located in the top left corner of the advertisement. It features the letters 'TSMR' in a stylized, blue, serif font with a white outline. The background of the entire advertisement is a blue sky with white clouds, and a white outline of the state of Montana is visible behind the text.

www.HardGoldCash.com

undergraze the top half and overgraze the bottom. If bottomlands are wet, livestock will tear up the sod. Instead, separate hilltops from valleys and run paddocks across the slope.

- d) **Gate location.** Put the gate in the paddock corner nearest the barn. Here’s what happens when gates are placed in the corner away from the barn: animals see the herd heading down the lane, head for the ungated corner, and mill around.
- e) **Lanes.** Short and narrow lanes will leave more room for growing forage. A 12-foot wide lane will serve a herd of 35 cattle or 350 sheep. An 18- to 24-foot-wide lane serves larger herds. Locate lanes in dry areas and install the lane using a gravel layer over geotextile fabric.
- f) **Stockwater location.** Locate watering sites away from ditches, streams, and ponds. Watering sites often concentrate livestock, manure, and mud. Livestock will graze more evenly and trample less forage if water is provided in each paddock. For an inexpensive and

portable stock tank: cut a 55-gallon plastic barrel in half and outfit it with a water float and garden hose. See the fact sheet “Managing Stockwater in Pastures and Streamside Areas” in this series for more details on providing stockwater.

Designing Fencing Near Streams

Animals wade in streams for water, shade, and fly relief. However, livestock can contract hoof rot and water-borne diseases, trample wildlife habitat, destabilize streambanks, and cause water pollution. A fence creates a buffer between the land and open water with many benefits. Keep these tips in mind when designing a near stream fence:

- a) **Fence location.** The wider the buffer, the greater the benefits will be for cleaner water, wildlife habitat, and reduced streambank erosion. Place the fence as far from the stream as possible. Fences placed closer than ten feet will bring few benefits and are more likely to be damaged from floods. Cost-share programs will require a generous buffer. See the fact sheet Managing

Near Streamside Areas with Buffers in this series, for more information on designing buffers.

- b) **Fence type.** Fencing areas that are frequently flooded can be a challenge. The most economical option is to install a temporary one-strand or permanent high tensile electric fence. Don’t use woven wire fence that is more likely to trap debris, injure wildlife, and be damaged in a flood.
- c) **Fence features.** When you install an electric fence in a frequently flooded area, include line switches. The switches allow you to shut off power to wires until floodwaters recede. Use pinlock insulators to reduce trash collection on wires and damage during floods. The insulators allow you to place wire on top of posts or to drop wire to the ground. Mow grass under electric fences, as needed.
- d) **Riparian pastures.** In some situations, a near stream or riparian pasture may be created to control weeds and produce forage. Work with a grazing

professional to successfully carry out this special practice.

Shocking Facts about Electric Fencing

An electric fence creates a fear barrier rather than a physical one for animals. Electric fences are often used in permanent high-tensile fences along the perimeter and as temporary single or double strand fences to divide pastures. Points to keep in mind about electric fences include:

- The main components are posts, wires, and insulators. Accessories include the charger and grounding rods. New Zealand chargers are more efficient with less fire danger than “zapper” chargers.
- The fence creates an electric circuit that runs from the energizer, over the wires, through moist ground and returns to

the grounding rods. In this example, the wet earth is half the circuit. Sandy or dry soils don’t conduct electricity very well. In these areas, a grounded return wire may be needed to close the circuit.

- Anything touching the wire can drain the charge to the ground and decrease the shocking power of the fence. Electric fences need to be inspected periodically to remove grasses and tree limbs that are touching the wires.
- Animals need to be trained to respect electric fences. A single wire inside a small pen will quickly teach animals. Horses monitor fence current and need a fence that is continuously charged.

Fencing - Key Parts

End Posts

Wire fences can exert up to 4,000 pounds of pressure on posts located at the end of a fence line. End posts need to be braced, made of steel or stout wood, and buried deeply to withstand this kind

Brace Posts

The brace post (H-brace) is the anchor that provides the strength to end posts. Brace posts are needed at the ends, corners, and on long runs on all fences, except wood rail and plastic types. A double brace (HH-brace) assembly will take wire pull in both directions.

Line Posts

Line posts are used to withstand animal pressure and maintain wire spacing. They may be made out of wood, steel, plastic, or fiberglass.

partner your
ranch will need

Types of Fences

Fence Type	Features	Initial Cost and Maintenance
Wood Plank	High strength, visibility Attractive, often used for horses or cattle near buildings Use offset electric wire to prevent horses chewing on wood	Expensive High upkeep for wood and paint
Woven Wire	High strength, visibility, available in different mesh sizes Add top board or wire for tall animals, add electric wires for sheep and goats with horns Unsafe for wildlife, consider using only in small areas close to buildings	Expensive Moderate upkeep
Plastic	Moderate strength, not for cattle Safe for horses and llamas	Expensive Low upkeep, no painting
High-tensile Electric	High strength, lower visibility Used for wide variety of animals Cost-effective compared to others	Moderate Moderate upkeep to retighten wire and cut back vegetation
Barbed wire	High strength, low visibility Never electrify barbed wire Unsafe for horses, llamas, and wildlife	Moderate Low upkeep to retighten wire
Electric wire	Psychological not physical barrier, animals need to be trained to respect wire Low visibility, electric “tape” may be used to increase visibility Permanent or temporary fence. Ideal for subdividing fields into smaller paddocks for pasture management	Inexpensive Moderate upkeep to retighten wire and cut back vegetation

HEALTHYPETNET™

Life's Abundance®

Premium Health Food
For Puppies & Adult Dogs

- **100% Complete and Balanced Nutrition**
- **No By-products**
- **No Artificial Colors**
- **No Chemical Preservatives**
- **Recommended by Veterinarians**

Healthy Goodness of a Home Cooked Nutritious Meal. Life's Abundance® is balanced and blended using only fresh and wholesome, healthy ingredients such as premium all-natural chicken and top quality fish along with fresh from the farm fruit, vegetables and quality food products. Life's Abundance® also contains a superior blend of vitamins, minerals, and antioxidants and contains no artificial flavors, colors, sugars, or chemical preservatives.

Life's Abundance® Dog Food provides 100% complete nutrition in accordance with the Association of American Feed Control Officials (AAFCO) feed protocols.

**Phone Orders:
1-888-887-4654**

Have a cat?
Life's Abundance® has
healthy food for cats too!

Gates

Gates should be sturdy and at least 16 feet wide for field equipment and lime, hay, or gravel trucks. Provide a people entry gate next to the main one to discourage fence climbing. For horses, consider secure latches that are "horse proof," but are easy to reach from horseback.

Safe Fences

For You:

Locate underground and overhead utilities before installing a fence. Call the Oregon Utility Notification Center at (800) 332-2344, to make sure there are no gas, water, or electric lines where you plan to dig postholes.

Wear heavy leather gloves and eye protection when installing a fence.

Wear a dust mask and hearing protection when sawing or driving treated wood posts.

Never install electric fences under power lines.

Notify neighbors, visitors, and small children about electric fences and instruct others on disconnecting the energizer in an emergency.

Post warning signs on electric boundary fences as required by law.

For Livestock:

Avoid sharp edges on gates, fences, and chutes that can cause injuries. Signs of hazardous fencing are shiny skin or bruises found under hair tufts. Sharp edges are found on nails, bolt ends, exposed pipe ends, and the tops of metal T-posts. Pipes with diameters larger than 3 inches are less likely to injure animals.

Equip gates with tiebacks to prevent gates from swinging into alleys and catching animals between gate end and fence.

Horses and llamas are inquisitive and will injure themselves on a poorly designed fence. Horses can get their legs caught between brace posts and fence wire. Block off this space or run woven fabric on the

occupied side of the fence. Ask your fence dealer for more information on protecting these animals.

For Help

Local farm supply store or fence material catalogs may have details on installing a fence.

Fence contractors install fences. Look in the yellow pages in the phone book under "Fences." Get several bids and check references.

The local soil and water conservation district (SWCD), USDA-Natural Resources Conservation Service (NRCS), and local watershed council may provide on-site technical advice and cost-share funding for fences that manage pastures and protect near stream areas. Contact your local SWCD, NRCS, and watershed council offices for details.

Oregon State University Extension Service provides assistance on fencing that manages pastures and protects near stream areas. Contact your local office for more information.

WHERE TO BE

- **Oct 3 - 4, 2008 Tulsa, OK Tulsa State Fair**
Entry forms on Tulsa State Fair website Superintendent - Brenda Foulks bfoulks74016@yahoo.com
- **October 4 & 5, 2008 8th Annual Alpaca Heritage Days.**
Looking for that special alpaca to add to your herd? How about some prime fiber and alpaca products? Mark your calendar now! The weekend offers private treaty sales, free seminars, and lots of shopping fun at Terhurne Orchards in Princeton, NJ. For more information including directions, go to www.AlpacaHeritage.com.
- **October 25, 2008, 9-3 Tucson Wool Festival**
Sponsored by the Withers Ranch as a community outreach and educational awareness program on fiber animals and arts, various breeders and vendors from throughout the southwest will be demonstrating their wares from their fiber animals on the Withers Ranch in Tucson, Arizona. Free booths are available. Seeking instructors for 2-3 hour classes. Contact Kathy Withers (520)572-3758, jmarckathy@aol.com. Additional information is on the Wool Festival page of www.uniquedesignsbykathy.com.
- **November 8, 2008 Alpaca Heritage Events presents Dr. LaRue Johnson's Neonatal Clinic in Bordentown, NJ.**
This clinic includes 6 hours of lecture and 90 minutes of wet lab for each registrant. Topics include reproductive anatomy and physiology, breeding and pregnancy diagnosis options, gestational development, care of the pregnant dam, normal and abnormal creation, and care of the newborns as well as high risk crias. The wet lab will include diagnosing the contents of the uterus, delivery plans and cria deliveries. Cost is \$200 per person and includes lunch. For more information and to register, visit us at www.AlpacaHeritage.com or contact Ingrid Wood at 609-261-0696.
- **November 9, 2008 Alpaca Heritage Events presents Camelid Infertility and Congenital/Genetic Defects,**
a seminar presented by Dr. LaRue Johnson. This informative session will be held in the Rutgers EcoComplex in Bordentown, NJ from 10:00 am to 2:00 pm. Cost is \$75 per person and includes lunch. For more information and to register, visit us at www.AlpacaHeritage.com.
- **November 7-9, 2008 North American Llama & Alpaca Show, Louisville, KY.**
Part of the World's Largest Purebred Livestock Show. Double llama, including mini classes, single alpaca and single llama fiber show. Deb Yeagle & Lora Crawford llama judges & Anthony Stachowski alpaca judge. Fiber judge Susie Smithers. Change in health requirements-no blood work from free states. Premiums plus awards and ribbons. One fee for unlimited classes same handler and llama. See website northamericanllama-alcacashow.com or contact Mary Jo Miller, 502-350-4525 brookscrllamas@bellsouth.net
- **November 9, 2008 Alpaca Heritage Event's Fleece Show at the Rutgers EcoComplex in Bordentown, NJ.**
All you need to compete in this fun show is 2 oz of prime alpaca fiber! Great for novices and experts alike! Simply mail-in your entries ahead of time or drop them off in the morning. For more information, go to www.AlpacaHeritage.com or call Ingrid Wood at 609-261-0696.
- **January 23, 2009 SCLA Select Llama Sale Friday at 6:00 pm**
Held in conjunction with the Ft Worth Expo and Stock Show. For information go to www.sclasale.com or Ft Worth entry info www.fwssr.com. The sale consist of 50 select lots and is the longest running association sale. Sale info contact Steve Berry- berry_patch@itexas.net, 817-279-6725.
- **March 21 & 22, 2009 3rd Annual March Magic Level III Double Casual Llama Show.**
Relax ~ Fun ~ Casual ~ No Groom ~ Low Entry Fees ~ Great Awards. Hosted by Llama Association of Southern California (LASC) Location: Antelope Valley Fairgrounds, Lancaster California. We will be offering all 4 wool divisions, driving, novice & advanced performance. All 3 youth age groups. Walking and shorn fleece will be a single show. March Magic had to be moved this year from the Fairplex in Pomona due to fairgrounds construction. This year's new facility is fully covered. No Rain Worries. Our show this year will be in conjunction with a Home and Garden Show. Show judges: Mark Smith ~ Senior Level Judge, Mary Jo Miller ~ Senior Level Judge Margaret Ricci ~ Level Judge Contact: Ken Sutton 760-240-6878 or SewSew25@aol.com or Tracey Wallace 909-792-3711 or DandT22@aol.com
- **April 3, 2009 The Grand Slam Llama Event '09 Friday April 3, 2009**
Held in conjunction with the 2009 Spring Celebration Sale & Futurity Heritage Place Oklahoma City OK for more information contact Shawn Norman at grandslam1@ymail.com or 405-476-0399. DON'T MISS THE BIGGEST GAME OF THE YEAR!!!!
- **April 3-5, 2009 - Spring Celebration Llama Sale, Heritage Place, Oklahoma City, OK.**
Tom & Nancy Simmons and Tim & Teresa Vincent have turned over the lead rope to Dan and Marilyn Milton after 20 years of putting on the Spring Celebration Llama Sale. 2009 will again see Shawn Norman's Grand Slam Llama show on Friday, the preview and sale will be on Saturday and the World Futurity on Sunday. Look for some new and exciting additions to the weekend's events. It is time to look over your herd and select your best for the grand slam show, sale, futurity and herd sire row. Contact Dan or Marilyn Milton at dmmilton@charter.net or 541-899-8097 for more information on the 2009 Spring Celebration Llama Sale.
